## DETAILED ACTION

### ***Specification***

The use of the trademark LEXAN has been noted in this application. It should be capitalized wherever it appears and be accompanied by the generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Only the generic terminology must be used in the claims.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4-10, 13-17 rejected under 35 U.S.C. 102(b) as being anticipated by Chen (US Patent 6,464,368). Chen teaches a night light (Figure 5) comprising: a base (11) including two leads for coupling to the wall outlet; a light bulb (Figure 4: 111) coupled to the base; and a container (13) including liquid (10) and glitter (101) therein coupled to the base. Chen further teaches a night light comprising: wherein the container comprises a body (13) and a bottom (121); wherein the container is located above the light bulb (Figure 5); wherein the container is coupled to the base with an extension piece (122); wherein the extension piece is coupled to the base with a collar

(attached to 11); wherein the container comprises a single piece (13). Chen also teaches a night light comprising: a base (11) including two leads for coupling to the wall outlet; a light bulb (Figure 4: 111) coupled to the base; a collar (attached to 11) coupled to the base; an extension (122) coupled to the collar and substantially surrounding the light bulb (Figure 5); and a container (13) including liquid (10) and glitter (101) therein coupled to the base. In addition, Chen discloses the “container comprises a single piece (13) with an open top and separate cap (the tear drop shaped portion, see Figure 4 and Col 2, lines 18-22).” Regarding claim 17, the method steps are met by the operation of Chen as applied to claim 1 above.

#### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2,3, 11, and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen as applied to claim 1 above, and further in view of Zale (US Patent 6,604,835). Chen does not disclose the container comprising of plastic that is temperature resistant. In a similar device, Zale teaches the container comprising of plastic that is temperature resistant (Column 3, lines 35-38). It would have been obvious to one of ordinary skill at the time of the invention to make the container from temperature resistant plastic, including LEXAN. One would be motivated to modify

Zale's container in this manner for the benefit of increased safety as plastic is break resistant.

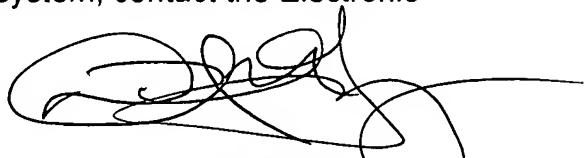

### ***Conclusion***

Chen teaches "bubbles" within the container that is coupled to the base, not glitter. However, Ford et al (US Patent Publication 2002/0172005) teaches "bubbles" and "glitter" are the same ([0006] lines 10-14).
